

MU-SIGMA

APTITUDE TEST:

- 15 simple quant and logic questions with negative marking.
- People who could solve even 10 correctly were able to clear the aptitude round.
TIP: Don't get stuck on one question. Go further and come back to that question if time permits.

ROUND 1:

VIDEO SYNTHESIS:

- You'll be shown a video clip of around 2-3 minutes from a Hollywood movie.
- You have to write your inferences about the clip. Please do not summarise.
- For example: We were shown a clip from the movie "2012". The scene showed the crowd fighting to get on the airplane which was permitted only to the ones with a green card (richer section). Then the main character telling heads of nations about right and wrong.
- Now to answer this correctly, you can write about the bravery of the man, discrimination between richer and the poorer sections, etc.
- And incorrect synthesis would be: people are fighting to get on the plane, man is giving a speech, etc.
- Write at least 3 major points and 2 sub points to support every major point.

PROBLEM SOLVING:

- A simple C-program dealing with loops.
- Data will be given, for example, Nokia sold 10,000 handsets in year 1, etc. In the end certain sum is asked, which you can easily get if you solve it patiently.
- A small error in the code can be asked to be corrected.

Results were announced and students were shortlisted after this round.

ROUND 2:

GD:

- Groups of 4 were made. Likewise there were around 21 groups.
- Each group was given a general management based problem, for example, the lowering sales of a so and so company. The group had to discuss about this problem and find a solution. There were 2 people from Musigma to guide during the GD.
You can ask them necessary data related to the problem that is not mentioned. This will add to your scoring points.

Again further shortlisting was done and we were called one by one for the interview round.

ROUND 3:

INTERVIEW:

- Simple non tech interview. Feel free to talk anything :P
- Be prepared for situation based questions such as, if you were the manager of a company then which kind of team will you prefer, generalists or specialists?
- Another question: I am the owner of a diaper producing company, I raised the price but still my sales are rising, how is that possible? Any lame but practically possible answer will do, but let him know that you are thinking. Don't be quiet whatsoever.
- I was asked about my family, the quality that I like the most about myself.
- Be thorough with your resume because it will be scanned and will be the source to most of the interview questions.
- In the end, why musigma?
- Then I asked him few questions about the company.

My interview lasted for 30 min. He asked me to wait outside for the results. After two minutes a ma'am came to me and said -"welcome to musigma" .

THAT'S IT..!! ☐
