

Pykih

- Aashutosh S. Bhatt
(computers)

Much of useful and exciting thing about the company are told to u by the founder himself during the pre-placement talk, so do attend that, it will be illuminating. **The stuff u get from the ppt will help u on the first day.**

The entire process was a two day process.

Day 1:(HR + Aptitude)

We were around 60. The process starts with a 5-7min HR type round. The round is conducted by the founder himself.

Tips : Just be u r self, don't panic be cool and answer what ever u r asked.

Out of 60 only 11 were selected for the aptitude test.

The Test:

It was not an aptitude test but a logical test. We were given 3 questions at start.

2 questions were geometry based and the other one was database question.

Questions:

1. A figure was given and we were asked to calculate the area or some thing.(cant remember too much :P)
2. Prove using geometry $(a+b)^2$ identity.
3. We were to design a table for given problem.

Again this test as not time bound...(unlimited time :P)

Lastly we were told to write a code for finding the longest streak (cricket streak).

After this round out of 11 only 5 cleared the test.

I was the only one to solve the database question....

Day 2 : (Coding Round)

Based on the test results we were assigned a task of studying a particular language.....

I was told to study ruby and back end related technologies. The rest 4 were to study web front end related technologies.

On the day we were given a set of questions to code, around 10 and I solve 9 of them (well 9.5 actually :P), the programs were simple.

At the end I was called and told that I have cleared and the offer letter was given.

At the end 2 people (Me and Utkarsh Pable) were placed at Pykih!!.
