

An overview of Job Profiles @ S.P.I.T.

It's a must criteria that all those preparing for placements must be aware of the job profiles that are available from the companies visiting our campus. Many a times we differentiate companies just on the basis of the salary that they provide or by the job location rather than searching on what technology you will be involved with when hired by that firm. (One of the best way to get to know about different firms in a better way would be to be in contact with ur seniors working in ur wishlist firms....so respect ur seniors folks :P or they may irritate u later ☹)

So, basically the job profiles offered here are based on three different fields:

1. Software based (which has lots of subcategories in it.)
2. Data Analytics/Business Intelligence
3. Electronics

1. **Software**

Here the job is more related to coding in various languages(c or object oriented).

2. **Data Analytics/Business Intelligence**

Here the job is more with data analysis, statistics and probability. These use less of programming languages like c++, java but have their own softwares for the job. This has been a very much booming field in the recent years. You will need to search more to get a basic idea of the job. The profile offered will be of Business Analyst or Decision Scientist

Companies visiting: EXL Services, MuSigma ,Fractal Analysis(This one is off campus-so u need to stay in touch with this company's hiring events)

3.**Electronics:**

U people must hv observed or heard that there not much jobs in this field for our students. This is **NOT** because SPIT doesn't deserve to have these firms but mostly bcoz we just learn to accept what is being offered. What we realized(though late) was that if we could create a database of such firms and den thru the TPC's contact them requesting them to visit our campus then we cud get a better response.We **CANNOT** burden the TPC's wid all these work. If you indeed want to work with an ETRX firm then it IS also ur responsibility to help the TPC's in this work. Together u guys cud indeed change the scenario of our college for the ahead years. It wud be a request to start wid this work ryt from ur mid sixth semester.

Companies visiting:LnT Core , Mitsubishi , Johnson Controls

Our earnest request wud be to pls not select ur firms just based on the payscale and location rather than ur interests. Wel agree that on that stage it is very difficult to realize ur interests but plss do gv a try in searchg abt the jobs ,companies -interact lots wid ur seniors

All these wud help you in deciding ur Dream Company ☐
