

# CREDIT SUISSE

*Kushagra Doshi*

## **The aptitude:**

Consisted of quant, verbal, puzzles (One of them was a version of Monty Hall Problem) and code.

## **The tech interview:**

1st question: Implement ur hash map class (I did in java with a lot of help from the interviewer and took abt ½ hr to write the entire proper code including main()). The interviewer was extremely friendly)

2nd question: U have a array of size million. It contains values 0-9. Sort it. (I said radix sort. He asked me to develop a custom approach). So with their help, i was able to develop a hash table containing the count.

3rd question: Tell me abt class Vector

4th question: Tell me abt Linked List in java

5th question: Tell me abt ur project and which data structures u used in them. He wanted to know the details of implementation of any one project. (Which language, how did u open the connection to databases, which classes were used for connection to db)

6th question: Difference between method and function (Didn't know tht, couldn't solve it till the end)

## **The Managerial Round:**

1. Say a few things about urself.
2. Asked a few things abt my project and my co curricular activities.
3. What would u do if u were bored of ur job in finance (Tricky to answer).

In the end, he encouraged people to ask any questions in an area outside of Credit Suisse (the interviewer was expressed his interest in aviation).

I asked him some questions related to finance.

## **The HR:**

1. Why Credit Suisse?
2. Would u be willing to relocate? (YES is the only answer they look for)
3. Mention some extracurricular activities of urs. What problems did u face?
4. Some question related to SPIT (It was something related to the competitive environment in SPIT, cannot remember)
5. Mention one quality which sets u apart from the other ppl.

Just be urself and keep ur calm,confidence!!!!

Best of luck.

U can ask me questions on fb or whatsapp me on +918108414878 .
