

Introduction To Graph

By Yash Gupta

- A graph is a collection of nodes called vertices, and line segments called arcs, that connect pair of nodes

finalDesk

Graph Terminologies

- Directed Graph (Digraph) : A graph in which each line has a direction (arrow head) to its successor.

- Undirected Graph : A graph in which there is no direction on any of lines representing bidirectional arc

- In-Degree : The no of arcs entering a vertex
- Out-Degree : The no of arcs leaving a vertex

finalDesk

Implementation Ways

- Adjacency Matrix
 - Size Must be known
 - Only one edge between two vertices
- Adjacency List

Traversal

Minimum Spanning Tree

- Each Vertex is included
- Total edge weight of spanning tree is minimum

D			20		25	20
E			30			15
F						

Hamiltonian Cycle

- Visit Each Vertex Only Once
- There should be an edge from last to first vertex

Roaming Engineers Problem

- Must Contain an Hamiltonian Cycle
- Shortest Path

	A	B	C	D
