Xoriant Placement Experience

-Chinmayee Dawre

Xoriant has a one day process.

The aptitude test was online.It consisted of MCQs on Networking, DBMS,OS, C and Java in general. Also there were two coding questions. Try to answer as much questions as you can, and code for at least one question.They are simple coding questions.

This was followed by a group discussion among 10 people. Pitch in relevant points and try to give illustrations. The judges were very interactive and provided feedback after the GD.

After GD were two interviews: Technical and HR.

The technical round revolved around OOPS concepts,algorithms, C and Java.I was asked if I had watched Inception, when I said yes, the interviewer asked me which algorithm did I think was used behind dreams within dreams. I answered that any recursively written algorithm can be used, and it was basically nesting. He was quite satisfied. Then I was asked to write simple Armstrong number and prime number codes as well. It was a fairly simple round.

The HR person grilled me a lot about my blog and committee work.Normal HR questions about hobbies and family background were also asked. Overall, it went quite nicely. Just be confident and go with the flow.

Xoriant is fully into product based engineering,so it is a good opportunity to grow technically.

All the best.
