CREDIT SUISSE

Mamta Jain

It is a 2 day process
On 1 day, they took aptitude test. Approximately 100 students sat for aptitude. Prior to aptitude, Credit Suisse does short listing based on Resume and your aggregates.

It was a paper-pen test with no negative marking.

The aptitude had following sections:
1.   Quant: It has simple quant (MCQs)
2.   Puzzles: around 7 puzzles
3.   Programming related section: It also had 7 questions. No need to write code with proper syntax, pseudo code works fine.
4.   Bonus Section: We had to design database schema for which case study was provided. But this section marks counts only if you had attended max. Questions from the previous sections.

For the aptitude you could refer "How to ace the brainteasers" which has good puzzles to boost your critical & logical thinking and it would be of great help to crack puzzles section.
For Programming Section, "Cracking the Coding Interview" will train you well. Try to explain your logic clearly and include comments wherever necessary.
Quant questions were similar to ones solved in R.S. Agarwal.
 All the answers except Section 1 required proper explanation.

Even if you are unable to solve all the questions, make sure that afterwards you know solutions to all the questions asked in the aptitude test.

Out of 100, around 30 were selected for the interviews.

Interviews were held on 2 day.

They had 3 interviews i.e. Technical, Managerial and lastly HR Interviews.
Normally they take 1-2 Technical rounds but at our time they took only 1 tech interview.

Technical Round was around 30-40 minutes. It was mostly based on resume. There were 2-3 programming questions which I had to write pseudo code for. Then they gave me a problem statement on which they asked 2-3 DBMS query. Sadly, I don't remember the exact question but assure you that with sound understanding of any one programming language and DBMS you can easily clear the tech round.

Managerial Round was a mix of tech + managerial skills. Some OOPS concepts were asked. Give examples while explaining the concept. Complex DBMS queries including join was asked. Query was something like how will you detect whether duplicate roll no. exist in your database. He also asked a few ethics related qn that you ever copied or let others copy in examination.

Other few qn were like how much time can you work maximum, how much you study regularly, any new news in IT that you have recently come across, what went wrong in internship interviews (Forgot to mention that I was rejected after tech round during Credit Suisse internship interview) and many more such questions.

He asked us to ask him any qn about Credit Suisse or even outside it.

Please guys be honest while answering. I sincerely believe that honesty pays off :-)

Finally **HR Interview!**!

It was like any normal HR Interview with questions like

- How was your day
- Tell me about yourself
- Your weakness and how did you improve on it
- One reason that we should hire you
- What went wrong in your internship interview
- Event that we had organized in SPACE
- Has there ever a fight while you were working in a team and how did you solved it
- Which project you were proud of and why
- MOST IMPORTANTLY
    Tell me everything you know/ heard about Credit Suisse and WHY Credit Suisse

They check your enthusiasm about the company.

So be enthusiastic, confident and research well about the company.

Every Interview is an elimination round.

Best of Luck!!
